LNx 1500

This is an automatic CNC sanding machine for turned components with 7 stations. As standard, the machine is fitted with 2 x CNC copiers for the flat belt sanding units and mechanically adjusted brush back sanding units for the shaped part of the turning. Movement of the copier units is via precision re-circulating ball / screw drive and linear bearings. The CNC copiers eliminate the need for using a template thus making set up times much quicker than conventional copy sanders. Components are loaded in the inclined feeding guides and automatically ejected at the back of the machine once the sanding cycle has been completed.

Equipment

Technical specifications

Max. sanding length	1500 mm
Max. sanding diam	250 mm
Head drive motor	4 Kw
Hydraulic motor	1,5 Kw
Total power installed	9,7 Kw
Weight of the machine	3.200 kg
Dimensions	4000x2000x2100(h) mm
